Dear valued customers,

Welcome to NORTAC Defence®'s new quarterly update. You will hear from us on recent improvements and new products/services. You'll also get a look into what we are working on and what you can expect in the future.

What are we working on?

- A totally re-designed Nortac Utility app so you can easily administer your NORTAC Wave® devices.
- Orion+: An advanced cellular app for Android that shows the location of other assets, has encrypted messaging, and allows for the creation of geofences and POIs, etc.
- Server Federation: TITAN-to-TITAN/TAK/Esri.
- A brand-new video module within TITAN BY NORTAC®. On the platform, view video, along with all your other assets, from Wi-Fi or LTE connected camera. Pushed back across Satellite via Wave88 at 88kbps
- WAVE 88: An Iridium Certus modem capable of PTT voice, video transmission, WhatsApp, remote area Wi-Fi network creation, and the ability to support Orion® and Orion®+.
- A brand-new tracker, the NORTAC CUBE, for economically tracking your vehicles and extending ATAK into the Beyond-Line-of-Sight (BLOS) realm through Iridium Short-Burst Data (SBD).
- TITAN BY NORTAC® Platform upgrades such as the "Mark POI" feature, Nearest Responder enhancements, the ability to search by device report date, cone geofences, and Garmin protocol updates. Email sales@nortacdefence.com for details on these features!

We understand that a lot of NORTAC's success is underpinned by our excellent customer service. We want to send out a friendly reminder that you can reach out to our support or sales emails at any time with questions or support queries.

Wishing you continued success,

The NORTAC Defence® team
